

Life Story Wealth Planning

You are building a new website for a financial advisory firm in Arizona. **This pack assumes you know nothing about the client, the firm, or the industry.** Read Part A end to end before you open an editor — the rules in section 7 will change how you approach everything else, and getting them wrong creates a regulatory problem for the client, not just an embarrassing one.

How to use this pack

Part A is for you. Read it in order, once, properly. **Part B is for Claude** — copy it into your project as `CLAUDE.md` and it will hold the rules for you while you work. Part B is written for a machine and will read oddly to a human; that is deliberate.

- | | |
|---|---|
| 1. The sixty-second version | 8. Voice |
| 2. Who the client is | 9. The pages to build |
| 3. Who the website is for | 10. Sites to study — including his own picks |
| 4. The one job this website has | 11. The build — stack, hosting, what not to touch |
| 5. What exists today — verified | 12. What "finished" means |
| 6. What is worth keeping | 13. What to send back before you build |
| 7. 🚫 The rules — read before writing a word | 14. Open gaps we still need from the client |

Three ground rules, before anything else

- **Do not contact the client directly.** Every question, every clarification, every "is this okay?" comes back through Arham. This is not politeness — the client is a regulated professional and communications with him are part of a compliance record.
- **Do not publish anything to the live site** until it has been reviewed. Build on a staging URL. The live site is the first thing prospective clients see when they check him out.
- **When in doubt, leave a marked gap rather than inventing.** A visible `[NEEDS CONFIRMATION]` is recoverable. A confident wrong statement on a financial adviser's website is not.

PART A

For you

Context, constraints and the specification. Read once in full before building.

1 • The sixty-second version

Alex Hilbert runs a small, licensed investment advisory firm in Arizona. His current website is a **single page** pretending to be a site — the menu items are anchor links that scroll you down the same page. There is no About page, no contact page, no service pages.

Almost nobody finds him by searching "financial advisor". **His clients come from referrals.** Someone recommends him, and that person then quietly searches his name to check he is real and safe before making contact. **Right now, when they do that, his own website does not appear on the first page of results** — LinkedIn, a regulatory records database and two data brokers do.

So you are not building a marketing funnel. **You are building the thing that reassures a careful, wealthy, sixty-year-old stranger who has just been given his name.** Everything in this pack follows from that one sentence.

1

page on the site today, with anchor links pretending to be a menu

~712

words of copy in total, across the whole site

0

analytics installed — nothing is being measured

0

meta description on the homepage

8

pages you are being asked to build

2 • Who the client is

Alex Hilbert is a Registered Investment Advisor. In the United States that is a specific, licensed, regulated role — not a job title someone picks for themselves. He is a **fiduciary**, which

means he is legally required to put his clients' interests ahead of his own. That single fact shapes every decision in this pack, especially section 7.

Life Story Wealth Planning — this project

His advisory firm. Manages money for individuals.
Based in the Phoenix / Scottsdale area of Arizona.
Small, and deliberately so. **This is the only business the website is for.**

DriveChain Capital Management — not this project

His separate commercial lending brokerage. Different audience, different brand, different site, different rules. **Do not blend the two.** If you find yourself writing about business loans or referral partners, you have drifted into the wrong company.

A third company, **Hilbert Financial Group**, has been closed. It may appear in old records and search results. It is not part of anything you are building, and it should not appear anywhere on the new site.

3 • Who the website is for

Not the general public, and not young people starting out.

The reader

Retired or semi-retired executives and business owners, typically around sixty. **They have already built their wealth** — they are not trying to get rich, they are trying not to lose what they have.

They are financially literate, they read carefully, and they have been marketed to their entire adult lives. They can smell a sales page instantly.

They are usually introduced by someone they trust, then go and check the person out **quietly, on their own**, before ever making contact.

What that means for your writing

- **Calm beats energetic.** Every time.
- **Specific beats impressive.**
- No urgency tactics, no countdowns, no "limited spots", no pop-ups.
- Long, plain sentences are fine. This reader will actually read them.
- Generous type size and real contrast — he is writing for sixty-year-old eyes.
- Anything that feels like pressure reads as desperation — and desperation in a person handling your retirement is disqualifying.

4 • The one job this website has

This is the most important section in Part A.

We measured the actual search volume for advisory terms in his area. It is tiny, and what volume exists is dominated by national firms with enormous budgets. **Search is not where his clients come from, and building for search traffic would be building the wrong site.**

Right now the site fails the test that actually matters

Search his name today and his own website does not appear on the first page. What appears instead is LinkedIn, a news directory, a regulatory records database, and two data brokers publishing his contact details. **Strangers are forming their first impression of him from pages he does not control.**

There is also a real, separate firm called **Life Story Financial** that ranks well for his firm's name. We cannot do anything about them — which is exactly why his own name and his location must be unmistakable on every page you build.

So build for **the person who already knows his name and is checking him out.** Make it obvious within five seconds that this is the right person, this is a real firm, and here is how to reach him. Everything else is secondary.

THE PRACTICAL CONSEQUENCE

The **About page is the most important page on this site** — more important than the homepage. That is the page a referred prospect actually reads. Give it the most care, the most detail, and his real photograph. Build the homepage to get people to it.

5 • What exists today — verified 16 September 2026

The current site is **lifestorywp.com**. It is WordPress, built with Elementor, hosted on SiteGround. **Go and look at it before reading further.** These findings were measured directly, not guessed.

FINDING	STATE	DETAIL, AND WHAT YOU DO ABOUT IT
It is one page	FIX	"Explore Tzur Magen" and "See Our Fee Model" look like navigation but are anchors that scroll down the same homepage. Search engines see one page, so the site can only ever rank for one thing. This is the core structural change you are making.
No meta description	FIX	The homepage has none at all, which is why his search results look empty and unconvincing. Every page you build gets a hand-written title and description.
WordPress sample post still live	STILL LIVE	The default "Hello world!" post is publicly reachable, along with an author archive for someone called "Sean" who is not Alex. Both are indexable and both are visible to anyone looking him up. Flagged 8 days ago and still live. Do not delete anything yourself — we do not yet know who Sean is. Raise it and it will be answered.
The headline is jargon	REWRITE	It currently reads <i>"Breaking through the Efficient Frontier."</i> The Efficient Frontier is a technical term from portfolio theory. His readers are smart but they are not academics, and this is the first sentence a stranger sees. It is the single worst line on the site.
Typo in live copy	FLAG	The fee section reads <i>"We charge no managements fees"</i> . Flag it — do not silently rewrite client copy, because on this site the exact wording matters (see section 6).
Nothing is measured	FIX	No analytics of any kind, and no Google Search Console. Part of your job. Until this is done nobody can tell whether any of the work succeeded.
The technical foundation is fine	OK	It loads quickly, it is secure, it can be crawled, the sitemap works. You are not fixing a broken site. You are building the site that should have been there.

6 • What is worth keeping

The current site is thin, but the *substance* on it is his, it is real, and it is genuinely differentiated.
Keep the substance. Rewrite the delivery.

The Tzur Magen 3-Layer Process

His named, proprietary investment process. Carry all three layers across — they are the backbone of the Approach page:

- **Layer 1 — Narrow the Universe.** Start with 21 asset classes across global stocks, bonds, commodities and currencies; narrow to 7 based on market conditions.

- **Layer 2 — Analyze the Constituents.** Go deeper into what makes up each asset class, filtering out excess downside risk and laggards.
- **Layer 3 — Craft the Strategy.** Using fundamental, technical and macroeconomic data — may buy outright, hold cash, sell covered calls, short-sell puts, hold limited futures exposure, or build long/short spreads.

Plus his supporting principles, all of which should survive the rewrite: **risk first, always · built to move · opportunity across markets · fully reconstituted quarterly · discretionary authority · cash treated as a position.**

Note the spelling: **Tzur Magen**. It has been transcribed wrongly in various places. Use this spelling and check it against the live site before you publish.

THE FEE MODEL — CARRY IT WORD FOR WORD

His fee structure is unusual and it is a genuine differentiator. It is **already published in his own wording on the live site**, which means you may reproduce it — but **reproduce it exactly**.

"We charge no managements fees. We only make money by increasing your wealth. Performance success fees of 30% are assessed quarterly only on excess returns above a high water mark and a quarterly 1.5% hurdle rate."

Current live wording, lifestorywp.com

Do not paraphrase it, do not simplify it, and above all do not build an illustration, example calculation or comparison chart from it. A worked example of what a client "would have paid" is a performance representation, and that is regulated. If you think the wording is unclear — and the typo suggests it needs a pass — flag it and it goes to the client's counsel. It does not get edited by you.

Custody — keep this, it does real work

The existing transparency section is reassurance for someone who has read about advisers stealing client money, and it answers the fear directly: separately managed accounts, not a pooled fund · full transparency into holdings · no lock-up periods · full access at all times · **a third-party custodian, because the firm never holds client money.** That last point is the most important sentence on the page. Give it a real page of its own.

7 • The rules — read before writing a word

Financial advisers in the United States are regulated in *how they advertise*. Things that are completely normal on any other marketing site are **not allowed here**. Getting this wrong does not produce an awkward conversation — it produces a regulatory problem for a licensed professional. **If you take nothing else from this pack, take this section.**

Never put these on the site

- **Client testimonials, reviews or ratings.**
Regulated separately and heavily. Do not add them "as placeholders" either.
- **Any performance figure, return, or track record.**
No charts of past results, no "our clients averaged X", no hypothetical growth illustrations.
- **Any investment minimum or fee figure** beyond the exact published wording in section 6.
- **Superlatives** — best, top-rated, leading, award-winning, #1, trusted.
- **Anything that reads as a promise or guarantee** about outcomes, safety or returns.
- **Client names, logos, photographs or stories** — even anonymised, even composite.
- **Invented credentials, awards, team members or years in business.** Do not fill a team page with stock photos of people who do not work there.
- **Trust badges, "as seen in" strips, or partner logos** you cannot substantiate.

Do this instead

- **Describe process, not results.** How he works, what he looks at, what he will not do.
- **State verifiable facts:** what the firm is, where it is, what a client can expect to happen, in what order.
- **Use plain description in place of persuasion.** On this site, clarity *is* the persuasion.
- **Leave a clearly marked gap and flag it** rather than inventing filler.
- **Send anything you are unsure about back for approval.** The client has legal counsel who reviews this material. Counsel decides — not you, and not us.
- **Keep a copy of every version you publish.** His industry requires published material to be retained for years and produced on request. Commit every published state to git, tagged and dated.

The single most likely mistake

Every instinct from normal web work says a professional services site needs **testimonials, a results section, and trust badges**. On this site those are the three most dangerous things you could add. If you catch yourself reaching for social proof — **stop and ask**. There are compliant alternatives and we will get you one.

The same instinct will tell you an adviser site needs numbers to feel credible. **Resist it**. The credibility here comes from specificity about *process*, not from figures.

8 • Voice

These are the client's own words about how he wants to sound, given to us directly. Follow them literally.

*Plain-spoken. First person. No jargon. No exclamation marks. Calm. It is fiduciary — a professional tone, but a **warm** professional tone.*

Alex Hilbert, on how the firm should read

Write like this

- "I manage portfolios for people who have already built their wealth."
- "Here is what happens when we work together."
- "I do not take custody of your money. It is held at a separate institution."
- "Most of my clients come to me because someone they trust suggested it."

Not like this

- "Unlock your financial future!"
- "We leverage a proprietary multi-factor framework to optimise alpha."
- "Trusted by hundreds of families across Arizona."
- "Breaking through the Efficient Frontier."

First person singular, not corporate "we", wherever it is truthful. The current site says "we" throughout. It is essentially him. "I" is more honest, reads warmer, and suits a referral audience far better — but check each instance, because some statements are genuinely about the firm.

One more note on the reader: he is precise, and so are his clients. **If you write a number, it has to be right.** If you are not certain of a fact, leave it out and flag it.

9 • The pages to build

Every one of these is a **real page at its own address**, reachable from a real navigation menu. That is the core structural change from what exists now.

PAGE	ADDRESS	WHAT IT HAS TO DO, AND WHAT TO WRITE
Home	/	Say who he is, who he helps, and where, in plain language above the fold . Replace the Efficient Frontier headline. One clear action: start a conversation. Think of this page as a signpost to About, not as the pitch itself.
About MOST IMPORTANT	/about	The page a referred prospect actually reads. Real photograph. Real background — he has been in the industry since 2012. Why he does this work. What being a fiduciary means in practice. First person throughout. Make his full name and Arizona location unmistakable, because this is the page that has to win the name search.
Approach	/approach	The Tzur Magen 3-Layer Process explained so a non-specialist can follow it. Diagram it if that helps — the 21→7 narrowing is genuinely visual. Process, never results.
Who I work with	/who-i-work-with	Lets the wrong reader leave and the right one recognise themselves. Describe the <i>situation</i> — already built wealth, approaching or in retirement, wants active risk management. No dollar figures or minimums.
Fees	/fees	His published wording from section 6, reproduced exactly. Explain the <i>structure</i> in plain language — no management fee, paid only on gains above a hurdle and a high-water mark — without inventing an example.
Custody	/custody	Where client money is actually held, and why that matters. The existing transparency content is a strong starting point. This page quietly answers "could this person steal from me?"
How we start NEW	/how-we-start	New page, added at the client's request. His words: " <i>I want to set client expectations so they know, here's the roadmap of how you onboard as a client, what that looks like.</i> " A numbered, plain-language walkthrough of the first conversation through to becoming a client. He still has to define this process — build the page, write the structure, and flag the content gap.
Contact	/contact	A real page. Booking, email, phone, and the city he operates from. The current site books through Calendly; a booking option stays unless you are told otherwise — but check with Arham before wiring anything, as his scheduling tooling is being changed.
Insights	/insights	Build the shell now, empty . He is planning a newsletter and re-publishing a research white paper, and both will live here. Do not fill it with generic finance blog posts — filler here is worse than emptiness.

WHY INSIGHTS MATTERS MORE THAN IT LOOKS

He is rebuilding a research white paper specifically so the site has something worth downloading. In his own words, looking at a competitor's downloads: *"They have some cool downloads, which I don't have yet, but I'll have to create. There's the white paper research project thing that I need to figure out how to recreate."* **Build Insights so a gated or ungated PDF drops into it cleanly later** — that is its real purpose. Ask before building any email-capture gate.

10 · Sites to study

Three lists, for three different reasons. Look at all of them before you design anything. **Study, do not clone.** Take structure, pacing and how they handle regulated claims — never their copy, images or layout wholesale.

A · The client's own picks — these carry the most weight

He named these himself on a call. **All three are content and copy references. He was explicit that he has no design reference** — *"I don't know of any very good designs... off the top of my head."* So design direction is yours to propose; copy direction is his and it is below.

SITE	USE IT FOR	WHAT HE ACTUALLY SAID
Redwood Investment Management "Risk first, success follows."	COPY NOT DESIGN	His primary reference. Likes: the philosophy is <i>"in the same ballpark of what I do"</i> — they lead with risk, like he does · <i>"their illustrations are simple and clear"</i> · <i>"they have a little video for everything"</i> , and he wants short explainer videos that <i>"doesn't have to be my face"</i> · their downloads and lead-gen assets. Dislikes, strongly: the scroll storyboard — <i>"way too much... over the top"</i> , loads a section at a time and <i>"you have to scroll really hard to get it to go to the next section."</i> Do not build a scroll-jacking site. He also noticed their events page says "Upcoming Events" above entries from 2024 — <i>"two and a half years out of date"</i> . He notices staleness. Do not build a page that will rot.
Flexible Plan Investments Jerry Wagner's firm	COPY NOT DESIGN	<i>"Content-wise, it's going to be pretty strong. And there's going to be a ton of content."</i> On the design: <i>"I don't like the way it is now"</i> — he says they were better in the past. Mine it for how an active-management philosophy gets explained at length.
Dynamic Performance Publishing	COPY	The publisher behind an active-management piece he pulled up. <i>"There's a lot of really good content that they have."</i> Article topics he pointed at: active versus passive, why use active management, retirement, investment theory. This is the intellectual territory the Insights section should eventually occupy.

OUTSTANDING

He was asked to send the URLs and has not yet. **Find them yourself by name** and confirm you have the right firms before drawing conclusions — there are similarly named companies in this industry, which is a live problem for his own firm too.

B • For craft — how good advisory sites are written

SITE	WHY
Ritholtz Wealth Management ritholtzwealth.com	The closest model to where Alex is heading. Built the firm on content and a distinct voice rather than advertising. Headline: "We Focus On What Works." A section reads "No hype. No shortcuts." That is the register. Note how they sound confident without ever claiming results — that is the exact trick you need to learn.
Abundo Wealth abundowealth.com	Unusually plain and direct about what they do and how they charge. The best study in explaining a fee structure in human language — directly relevant to the Fees page.
Facet facet.com	Far bigger and more mass-market, so do not copy the tone — but the clearest example of turning an abstract service into something a stranger understands in one screen.
Kitces kitces.com	Not a design reference — the industry's own reference site. If you want to check whether something is normal or risky in adviser marketing, the answer is usually here.

C • The competitive set — who actually appears in his area

SITE	WHY
ABLE Financial Group ablefinancialgroup.com	The most useful comparison. A Scottsdale advisory firm of similar size that ranks well. Their menu runs to nine sections — who we are, our team, who we serve, our process, resources and more. That is the contrast to internalise: they have a site, Alex has a page.
Trajan Wealth trajanwealth.com	Another Arizona firm ranking on the same terms. Look at how they handle location pages.
Edward Jones • Thrivent • Mariner	They occupy most of the first page of results. We are not competing with them on search — this is context for why the referral-and-name strategy is the right one.

Two of the sites above block automated access. Open them in a normal browser rather than trying to fetch them.

11 • The build

DECISION ALREADY TAKEN

This is a fresh build, not a WordPress rebuild. Next.js or Astro, your choice — pick the one you are genuinely faster and better in. The existing WordPress install stays up and untouched until the new site is approved and ready to switch.

Stack and constraints

- **Static-first.** There is no application here — it is eight content pages. Static generation, no database, no CMS unless you can justify it. Fast, cheap, nothing to maintain, nothing to get hacked.
- **Git is the record.** Every published version must be retrievable for years (section 7). Commit properly, tag each published release with a date. **This is a compliance requirement, not housekeeping.**
- **The contact form.** Do not roll your own mail handling. Use a hosted form service or a serverless function, and **ask before choosing** — where enquiry data lands is a question about client data, not a technical preference.
- **Accessibility is not optional here.** The audience is around sixty. Generous base type, strong contrast, real focus states, no thin grey text on white. Target WCAG AA and actually check it.
- **Performance.** Static pages, compressed images, minimal JavaScript. There is no reason for this site to be slow and every reason for it to be fast.
- **Analytics and Search Console** installed and confirmed reporting before you call it done. Use a privacy-respecting analytics tool; ask before adding anything that sets marketing cookies.

Do not touch these

- **DNS and domain settings.** Not yours to change. The cutover is a scheduled, approved event — not something that happens because the build is finished.
- **The live WordPress site.** Leave it running exactly as it is. Do not delete the sample post, the author page, or anything else, however obviously wrong it looks.
- **Hosting and billing accounts.** If you need access to something, ask. Do not sign the client up for anything, and do not create accounts in his name.
- **Anything on the drivechaincapital.com side.** Different company, not this project.

Deliver on a staging URL

Build and deploy to a preview URL — a Vercel or Netlify preview is fine. **Make sure it is not indexable** (`noindex` and robots disallow), because a staging copy of an adviser's site appearing in search results is its own problem. Send the staging link, not a zip.

12 · What "finished" means

- ☐ Every page in section 9 exists at its own address and is reachable from a real navigation menu — no anchor links standing in for pages.
- ☐ Every page has a **hand-written title and meta description**. No generated filler.
- ☐ Searching his firm's name and his personal name returns his own site. His name appears in page titles, and the About page is built around it.
- ☐ **Analytics and Search Console installed and confirmed reporting**. Until this is done, nobody can tell whether any of the work succeeded.
- ☐ It works properly on a phone, and it is readable for someone around sixty — generous type, real contrast, WCAG AA checked.
- ☐ **Nothing on the site breaks section 7**, and anything uncertain has been sent back for approval rather than guessed.
- ☐ Every published version is committed and tagged, so material can be produced later if asked for.
- ☐ The staging site is `noindex` until the day it goes live.
- ☐ A written list of every `[NEEDS CONFIRMATION]` gap left in the build.

13 · What to send back before you build

Come back with three things first, so we are not correcting a finished site.

1 • A sitemap

The page list from section 9, adjusted with anything you think is missing, and your reasoning for each change.

2 • Home and About, written

Copy first, in plain text. Not in a design, not in a mockup. If the words work, the design will follow. If they do not, no design saves it.

3 • A list of what you need

Photograph, the onboarding process for /how-we-start , anything factual you cannot verify. **We will get answers — do not fill gaps with invention.**

Send these to Arham, not to the client.

14 • Open gaps we still need from the client

Known missing pieces. Flag anything else you hit.

GAP	DETAIL
A real photograph	The About page needs one and it is the single highest-impact asset on the site. No stock photography, under any circumstances.
The onboarding process	For /how-we-start . He has said he needs to define it — <i>"So I just need to define my process."</i> Build the page structure and leave the steps marked.
Who "Sean" is	The author archive on the live WordPress site. Needs an answer before anything is deleted.
The fee wording pass	Including the "managements fees" typo. Goes to counsel, not to you.
Contact details to publish	Which email, which phone number, which city. Do not lift them from data-broker listings — that is where the wrong ones come from.
The booking tool	Currently Calendly; his scheduling setup is being changed. Confirm before wiring anything.
Any required disclosures	Advisory firms typically need specific footer disclosures and links to regulatory filings. Ask — do not copy another firm's footer.

PART B

For Claude

Written to be pasted into a machine, not read for pleasure. Section B1 goes in as CLAUDE.md; B2–B4 are prompts to run in order.

B0 · How to use Part B

1. Create the project folder and `git init` it.
2. Copy **B1** verbatim into `CLAUDE.md` at the project root. Claude reads it automatically every session, so the compliance rules stay loaded without you re-explaining them.
3. Run **B2** to produce the copy deck. **Read it yourself before building.**
4. Run **B3** to build.
5. Run **B4** before you send anything back. It is the gate, not a formality.

THE ONE THING TO UNDERSTAND ABOUT WORKING THIS WAY

Claude will happily write you a beautiful adviser website with testimonials, a performance chart and a "Trusted by 200+ families" strip, because that is what the overwhelming majority of its training data looks like. **The rules file exists to stop exactly that.** Do not remove it, do not summarise it, and if Claude proposes social proof anyway, that is the rules file doing its job imperfectly — not permission.

B1 · Drop this in as CLAUDE.md

CLAUDE.md – Life Story Wealth Planning website

What this project is

A new marketing website for **Life Story Wealth Planning**, a small US Registered Investment Advisor (RIA) firm in the Phoenix/Scottsdale area of Arizona, run by **Alex Hilbert**. Static site, 9 pages, fresh build. Replacing a single-page WordPress site.

The principal is a **fiduciary** – legally required to act in clients' interests ahead of his own.

This is a regulated advertising surface. Treat every word as compliance-relevant.

The audience – write for this person

Retired or semi-retired executives and business owners, around 60. Already wealthy; trying not to lose it rather than to get rich. Financially literate, careful readers, marketed at all their lives.

Usually **referred by someone they trust**, then they search his name privately to check he is real before making contact.

The site's job: **reassure a referred stranger who is checking him out.** Not lead generation. The About page is therefore the most important page, not the homepage.

🚫 HARD CONSTRAINTS – refuse, do not negotiate

Never generate, suggest, scaffold, or leave placeholders for any of the following. If a request would require one, stop and say it cannot be done and why.

1. **Client testimonials, reviews, ratings, or star widgets.** Including "placeholder" ones.
2. **Any performance figure, return, track record, or backtest.** No charts of results, no "clients averaged X", no hypothetical growth illustrations, no worked fee examples showing what someone "would have paid" or earned.
3. **Any investment minimum, or any fee figure** other than the exact published wording in "Approved fee wording" below. Reproduce it verbatim; never paraphrase or simplify it.
4. **Superlatives**: best, top, #1, leading, award-winning, trusted, premier, elite.
5. **Promises or guarantees** about outcomes, safety, protection, or returns. Avoid implying them through confident phrasing too.
6. **Client names, logos, photographs, case studies or stories** – even anonymised or composite.
7. **Invented facts**: credentials, certifications, awards, team members, years in business, assets under management, client counts, office locations.
8. **Stock photography of people** presented as the team or as clients.
9. **Trust badges, "as seen in" strips, media logos, partner logos.**

If a fact is needed and not supplied, output `[NEEDS CONFIRMATION: what is needed]` inline and list it in the gaps file. **Never fill a gap with a plausible guess.** A visible gap is recoverable; a confident wrong claim on a regulated adviser's website is not.

Voice – the client's own instruction

"Plain-spoken. First person. No jargon. No exclamation marks. Calm. It is fiduciary – a

professional tone, but a warm professional tone."

- First person singular ("I") wherever truthful. The old site says "we"; it is essentially him.
- No exclamation marks anywhere. This is a literal instruction.
- Long plain sentences are fine – this reader reads.
- Describe **process**, never results. Clarity is the persuasion on this site.
- Calm beats energetic. Specific beats impressive.

Good: "I manage portfolios for people who have already built their wealth."

Good: "I do not take custody of your money. It is held at a separate institution."

Bad: "Unlock your financial future!"

Bad: "We leverage a proprietary multi-factor framework to optimise alpha."

Bad: "Breaking through the Efficient Frontier." (the current headline – jargon, replace it)

~~##~~ Approved fee wording – reproduce EXACTLY, never rewrite

"We charge no managements fees. We only make money by increasing your wealth. Performance success

fees of 30% are assessed quarterly only on excess returns above a high water mark and a quarterly

1.5% hurdle rate."

(The typo "managements" is in the client's published copy. Do not silently correct it – it is flagged for counsel. Do not build any example, illustration or comparison from these numbers.)

~~##~~ Approved substance – his, real, reusable

The Tzur Magen 3-Layer Process (check this spelling every time):

- Layer 1, Narrow the Universe: 21 asset classes across global stocks, bonds, commodities and currencies, narrowed to 7 based on market conditions.
- Layer 2, Analyze the Constituents: deeper analysis of what makes up each class; filter out excess downside risk and laggards.
- Layer 3, Craft the Strategy: fundamental, technical and macroeconomic data; may buy outright,
hold cash, sell covered calls, short-sell puts, hold limited futures exposure, or build long/short spreads.

Principles: risk first always · built to move · opportunity across markets · fully reconstituted

quarterly · discretionary authority · cash treated as a position.

Custody: separately managed accounts, not a pooled fund · full transparency into holdings · no lock-up periods · full access at all times · third-party custodian, the firm never holds client money.

~~##~~ Pages

/ home · /about (most important) · /approach · /who-i-work-with · /fees · /custody · /how-we-start (onboarding roadmap – client has not defined the steps yet, mark the gap) · /contact · /insights (build empty; a white paper and newsletter land here later; no filler posts)

~~##~~ Scope boundaries

- This is **Life Story Wealth Planning only**. DriveChain Capital Management is a separate

- lending business – if content drifts to business loans or referral partners, stop.
- Hilbert Financial Group is closed. It must not appear anywhere on the site.

Technical

- Static-first. No database, no CMS. Minimal JavaScript.
- ****Accessibility is a hard requirement**** – audience is ~60. WCAG AA, generous base type, strong contrast, real focus states. No thin grey text on white.
- Every page needs a hand-written title and meta description.
- Staging must be noindex + robots disallow until launch.
- ****Never modify DNS, the live WordPress site, or any hosting or billing account.****
- Commit every published state with a dated tag – published material must be retained for years
and produced on request. This is a compliance requirement.

When unsure

Ask. Do not guess, and do not proceed on an assumption about a regulated claim. Questions go to Arham, never to the client directly.

B2 · Copy prompt — run this first

Read CLAUDE.md in full before responding.

Write the complete copy deck for this website, as plain markdown. No design, no HTML, no code. Copy only.

For each of the nine pages, give me:

1. The page title (browser/SEO title) and meta description, hand-written.
2. The H1.
3. Every section heading and the body copy underneath it, in full and final form – not notes, not bullet summaries. Write it as it would appear on the page.
4. The call to action, if that page has one.

Rules for this task:

- Apply every hard constraint in CLAUDE.md. If any section would need a prohibited element to work, restructure the section instead.
- First person singular wherever truthful. No exclamation marks.
- Replace the current "Breaking through the Efficient Frontier" headline with something a non-academic reader understands immediately, that still signals risk-first active management.
- The About page is the most important. Write it longest and with most care. It must make his full name and Arizona location unmistakable, because it has to win a search for his name.
- Use the approved fee wording verbatim on /fees. Build no examples from it.
- For /how-we-start, write the page structure and the connective copy, but mark each step `[NEEDS CONFIRMATION: client to define step N]`.
- Use only facts present in CLAUDE.md. Anything else becomes `[NEEDS CONFIRMATION: ...]`.

Then, separately, output two lists:

- ****GAPS**** – every `[NEEDS CONFIRMATION]` you left, with what is needed and who would know.
- ****COMPLIANCE NOTES**** – anything you deliberately avoided or restructured because of a constraint, so a human can check your reasoning.

Do not begin building anything. Copy only. Stop when the deck is written.

B3 · Build prompt — only after the copy is approved

Read CLAUDE.md in full before responding.

The copy deck is approved and is in copy/. Build the site.

- Static site. Use the framework already set up in this project.
- Nine pages at the addresses listed in CLAUDE.md, each a real route, reachable from a real navigation menu. No anchor links standing in for pages.
- Use the approved copy exactly as written. If you believe a line should change, raise it – do not edit it.
- Accessibility is a hard requirement, not a pass at the end: semantic headings in order, real landmarks, visible focus states, WCAG AA contrast, base font size no smaller than 18px, and every interactive element reachable by keyboard.
- Responsive and genuinely usable on a phone.
- Hand-written title and meta description per page, from the copy deck.
- Add noindex and a robots disallow for the staging deployment.
- Compress and size images properly. No layout shift.
- Do not add analytics yet – that is a separate approved step.
- Do not add a contact form handler yet. Build the form markup; leave the submission target marked `[NEEDS DECISION: where enquiry data goes]`.

Design direction: calm, spacious, serious, and legible. The audience is around sixty and financially sophisticated. Think closer to a good law firm or a research publication than to a SaaS landing page. No scroll-jacking, no section-by-section scroll animation – the client explicitly disliked that on a competitor's site. No carousels. No pop-ups.

Commit as you go with clear messages. When finished, list every file created and every `[NEEDS CONFIRMATION]` or `[NEEDS DECISION]` still outstanding.

B4 · Pre-send review prompt — the gate

Read CLAUDE.md in full, then audit this entire site against it before it is sent for review.

Act as an adversarial compliance reviewer for a US Registered Investment Advisor. Your job is to find what would embarrass or endanger the client, not to approve your own work. Check every page, including copy you wrote yourself.

Report, per finding: the file, the exact text, which constraint it breaches, and a compliant replacement.

Check specifically:

1. Any testimonial, review, rating, or social proof of any kind.
2. Any performance figure, return, track record, or worked example built from the fee numbers.
3. Any fee or minimum wording that differs even slightly from the approved wording.
4. Superlatives: best, top, leading, #1, trusted, premier, elite, award-winning.
5. Any promise, guarantee, or implied assurance about outcomes, safety or returns.
6. Any invented fact – credentials, awards, team members, years, client counts, AUM, locations.
7. Any stock photograph of a person presented as the principal, team, or a client.
8. Any exclamation mark.
9. Any mention of DriveChain Capital Management or Hilbert Financial Group.
10. Any remaining jargon a non-specialist would not follow.
11. Every `[NEEDS CONFIRMATION]` and `[NEEDS DECISION]` still in the build.

Then verify:

- Every page has a unique hand-written title and meta description.
- Heading order is semantically correct on every page.
- WCAG AA contrast passes; base type is at least 18px; focus states are visible.
- The site is noindex on staging.
- Every nav item is a real route, not an anchor.

Output a single table of findings ordered by severity, then a plain yes/no on whether this is safe to send for human review. If the answer is no, say what must change first.

Prepared by Arham, First Movers. Site findings measured directly from lifestorywp.com on 16 September 2026. Audience, voice, process, fee wording and reference sites taken from recorded working sessions with the client. **Commercial terms, engagement details and the client's private business information are deliberately excluded from this document.**

Questions go back through Arham. Do not contact the client directly. Internal working document — not for the client, and not for publication.
